CONCLUSION

PROBLEM STATEMENT

- The Kerala Technological University (KTU) community thrives on a diverse range of extracurricular activities that enrich students' overall educational experience.
- These activities encompass sports, cultural events, workshops, seminars, community service, and more.
- The current process of managing activity points lacks efficiency and transparency, leading to various challenges for students, faculty, and administrators. To address these issues, there is a pressing need for a comprehensive Activity Point Management System (APMS) tailored to the specific requirements of KTU.

INTRODUCTION

- The Activity Points Management System focuses on organization of activity points.
- Features – uploading, storing, getting real-time data, point updating.
- There shall be three user types, Student, Teacher and Admin with different interfaces.
- The system will be efficient, hassle-free, and organized.

LITERATURE SURVEY

Study of Existing system:

- Current system revolves around a dedicated google drive designated by the faculty.
- After verifying the certificates, teachers enter the points into the university website.
- The Students will be able to check their KTU profile for updated points.

Limitations:

- Limited

Transparency

- Scalability challenges
- Security Concerns
- Inefficient Tracking
- Limited Organisation
- Poor User experience

METHODOLOGY AND DESIGN

1. Requirements Gathering:

- a. Identify key features, such as activity proposal submission, point allocation criteria, verification process, communication channels, and reporting capabilities.

2. System Analysis and Design:

- a. Create use case diagrams, sequence diagrams, and entity-relationship diagrams to illustrate system functionalities and interactions.
- b. Determine the technology stack, considering factors such as scalability, security, and usability.

3. Prototyping and Iterative Development:

- a. Develop prototypes of the KTU Activity Point Management System to gather feedback from stakeholders.

4.Interface Design:

- Design intuitive and user-friendly interfaces for students, faculty, and administrators, considering accessibility and ease of navigation.
- Incorporate features such as activity submission forms, dashboards for tracking points, and notification systems for updates and reminders.

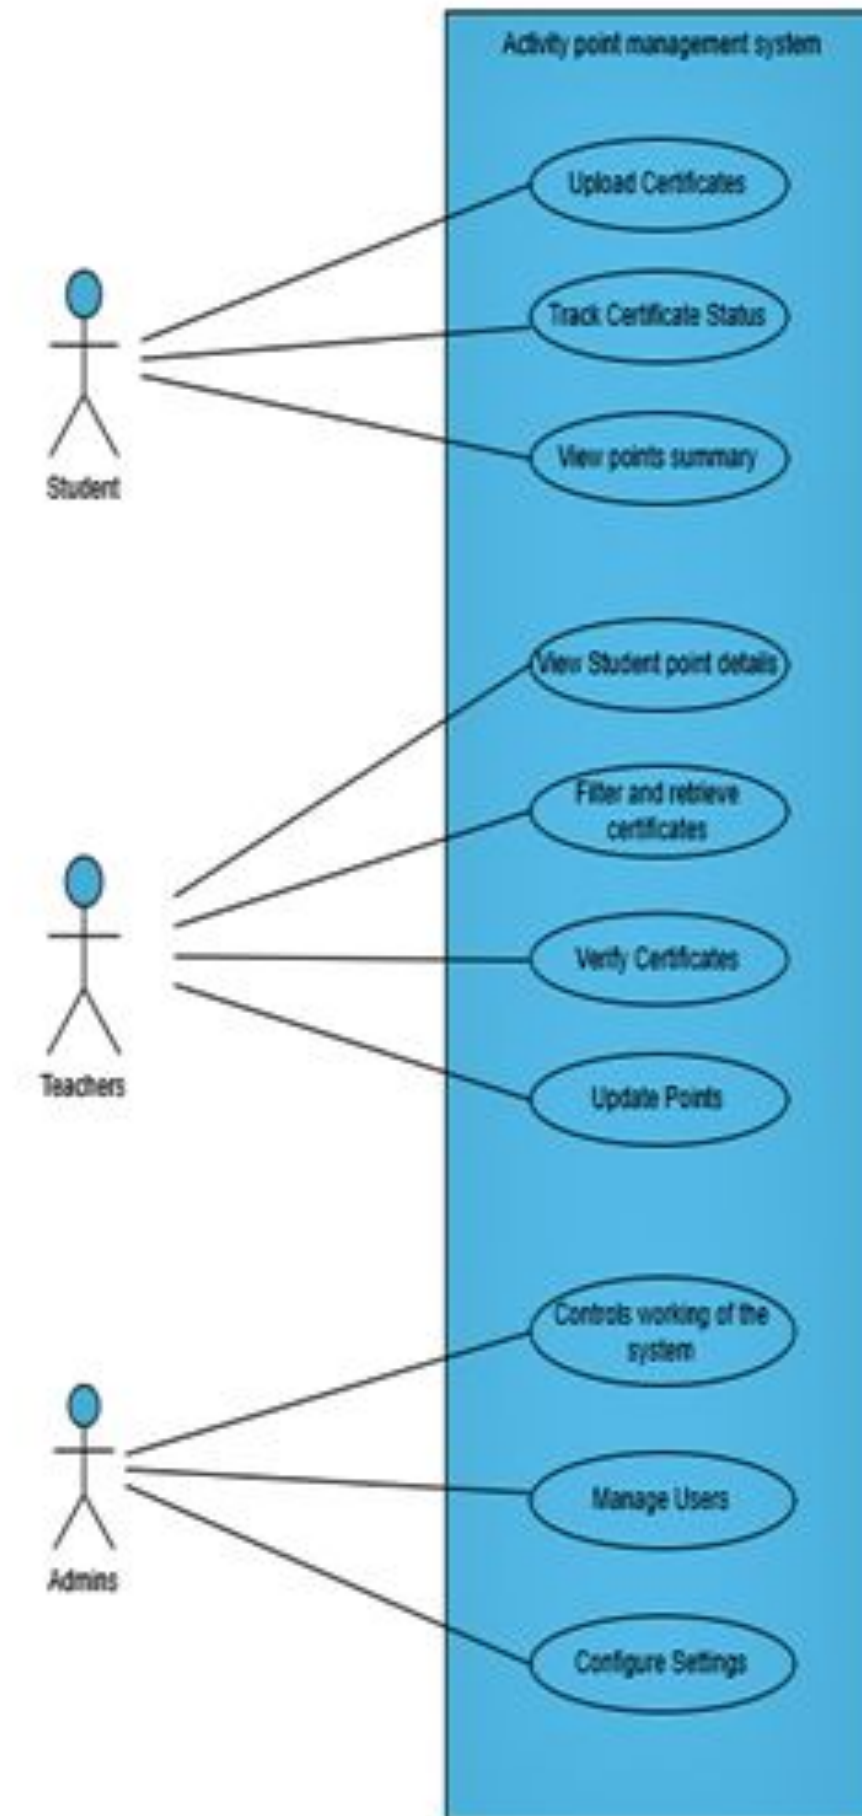

5.Backend Development:

- Build the backend infrastructure for data storage, processing, and authentication.

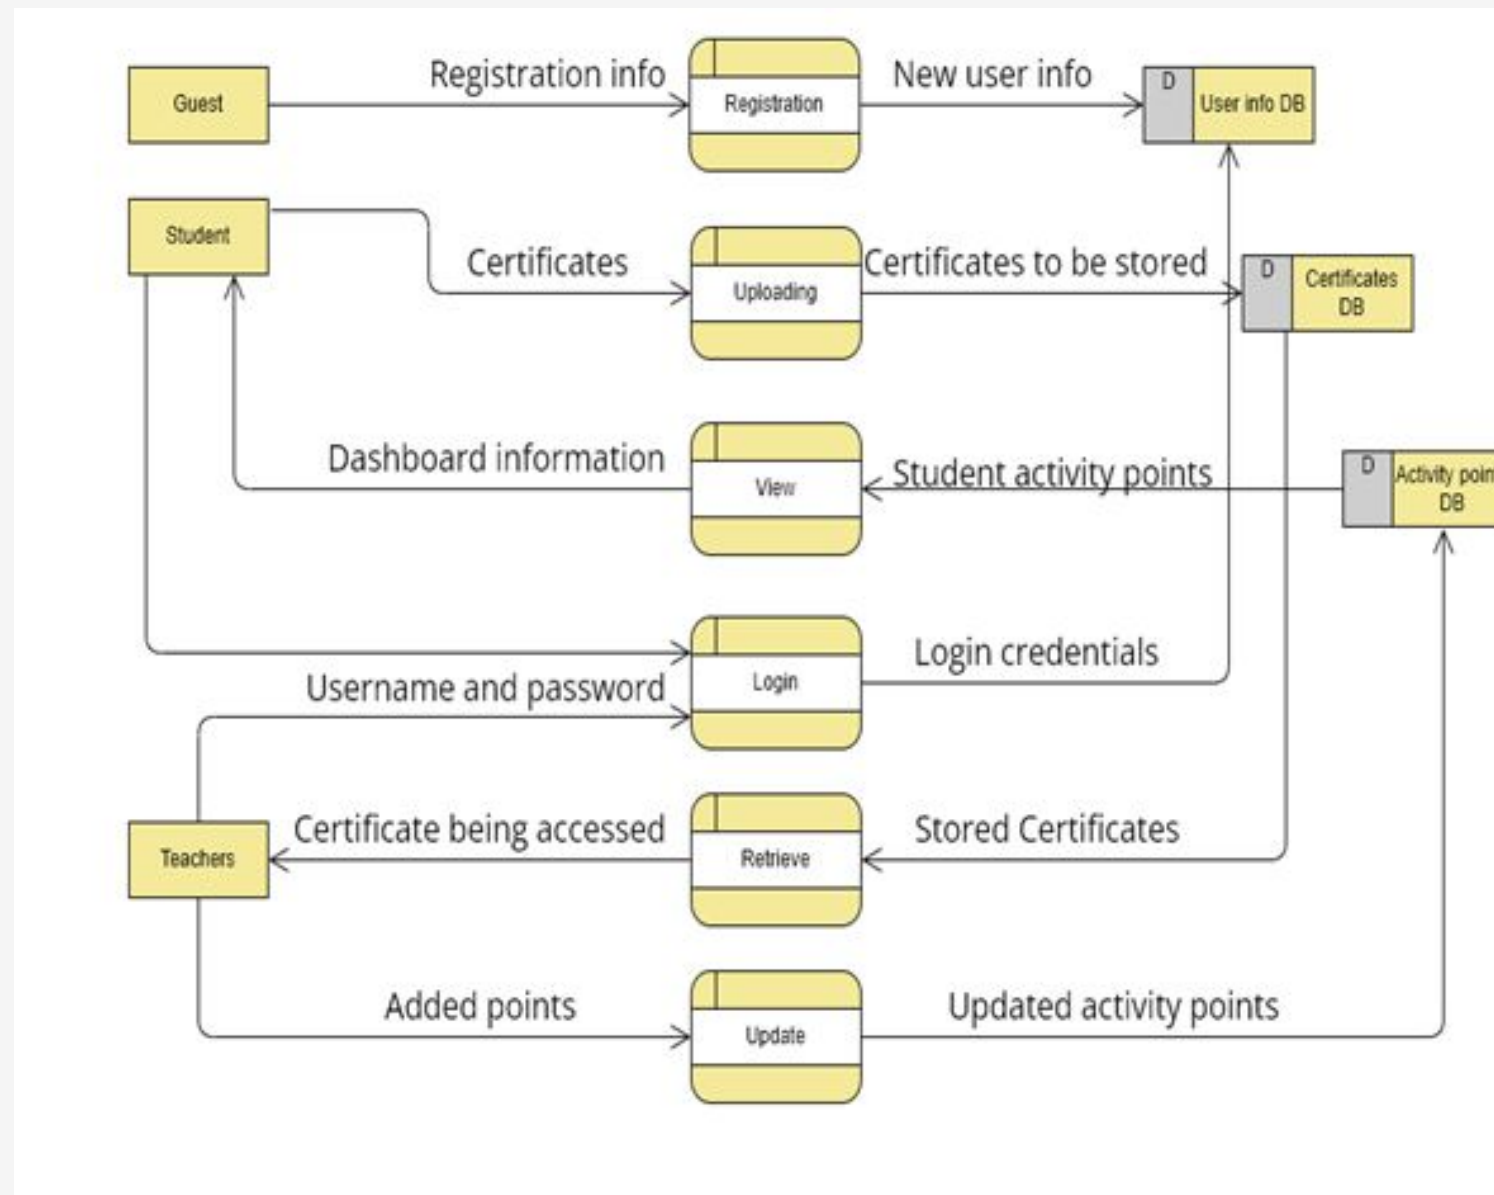

6.Integration and Testing:

- Integrate the KTU Activity Point Management System with existing KTU systems, such as student databases and authentication mechanisms.
- Conduct thorough testing, including unit tests, integration tests, and user acceptance testing, to identify and resolve any bugs or issues.

Activity point management Made a breeze!

ActiScore is a website aimed at assisting teachers and students to easily manage and track their KTU activity points.

A centralised system that provides ability to efficiently manage student activity points and their certificates, offers progress visibility to students and more.

PROJECT PROGRESS

1. Added a homepage containing a brief description of the website and with links to the signup and login page.
2. Created a user database model for signup and authentication as either student or teacher.
3. Secure storage of user passwords using PBKDF2 algorithm with a SHA256 hash.
4. Implemented the registration and authentication forms.
5. Created teacher and student homepage.
6. Implemented mechanism for teachers to approve student account creation requests.
7. Implemented mechanism for students to upload activities and for teachers to view the same.
8. Implemented upload activity validations to ensure the points does not pass the limit for category

PROJECT PROGRESS

- 8. Provided dashboard for teacher contains the assigned students information.
- 9. Provided dashboard for students to identify the certificates uploaded.
- 10. Implemented user info updation facility.
- 11. Grouped the certificates uploaded by by the students in separate folders with with student name
in the teacher's page.
- 12. Implemented page for teachers to view activity upload requests and approve or reject requests.
- 12. Implemented notification system for students to track activity requests updates.

TIMELINE

CONCLUSION

- The KTU Activity Point Management System represents a pivotal advancement in our university's approach to student engagement and recognition. Through this innovative platform, students gain not only a means to track their extracurricular achievements but also a pathway to holistic personal and professional development.

Key takeaways from our discussion include:

1. Enhanced Transparency and Accountability:
2. Promotion of Holistic Development:
3. Preparation for Future Success:
4. Community Building and Engagement:
5. Seamless certificate verification:
